

Higher Standards for Business-Critical Logistics

Today's business environment requires companies to strike a balance between demand and need for more cost-effective operations, while maintaining high health, safety, and environmental standards.

Innovations and new technologies provide companies more real-time information than ever before to gain efficiencies in managing physical assets and equipment. The promise of operational excellence through new developments in Enterprise Asset Management (EAM) systems is often not attained.

To realize the benefits of EAM or any transformational technology, logistics operators must have the ability to fully utilize the information provided by the system and use it to make effective real time operational decisions.

GB Tech seamlessly integrates as your in-house service provider, helping operations, materials management and logistics teams raise standards of performance.

GB Tech raises the bar for outsourced logistic services, using proven best practices in logistics and asset management processes that consistently exceed customer demands and client satisfaction.

Precision in services performed:

- On-time delivery
- Implementing high-quality, innovative solutions meeting exact needs and budget
- Raising standard practices for efficiency
- Accuracy and quality assurance

GB Tech helps you meet new logistics standards and regulations:

- Physical Inventory & System Accuracy
- Non-Conforming Material Control & Disposition
- Equipment Inventory Storage Accounts Management
- Equipment Move Coordination
- Work Instructions & Safety Requirements
- Record Retention of Government Documentation

Accelerating Asset Management Maturity

GB Tech helps companies accelerate their path in asset management maturity by delivering higher reliability and greater performance in service delivery.

We help you elevate maintenance, transportation and logistics to the value chain.
